

# Handheld

## Undumping a Container from a Run - Handheld Prerequisites

- Handheld module **Serialized Bins**: purchased and installed
- At least one user license must be purchased and active
- At least one mobile device available
- Containers already dumped into a run

### Where do I find Undump?

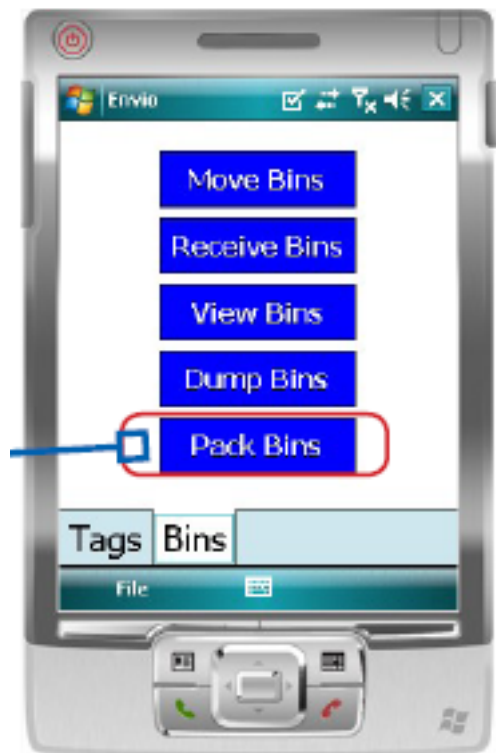

- **Handheld > Bin > Packout > "container that has been dumped"**

### Why & When Undump is Used

If a bin is mistakenly dumped into a run, the Undump button allows the operator to undump the bin from that run. This removes the bin from the run and puts it back into raw inventory (if applicable).

### How to Undump a Tag using a handheld

1. Turn on handheld
2. Touch the Envio icon to start the application
3. A screen with blue boxes appears. Two tabs will also show: **Tags** and **Bins**. Touch the **Bins** tab.

4. Touch the **Pack Bins** button.
5. A list of Runs will show.
6. Touch a row that has the container that must be undumped, or type in the run number in the **Select Run** text field.
7. Touch **Select** in the bottom right-hand corner. The **Bin Packout** detail

# Handheld

screen displays.

8. Be sure the cursor is located in the **Container** text field.
9. Touch to choose a container/bin to undump.
  - Scan a container/bin number tag & press **Undump**  
**OR**
  - Manually enter the container number in the **Container** text field and press **Undump**  
**OR**
  - Highlight a load from the list. Touch with finger or stylus. Once line is highlighted blue, press **Undump**.
10. A confirmation appears. Touch **Yes** to confirm.
  - The handheld deletes the dumping transaction. The run should no longer show the container in the Dumped Product Tab in Envio.
  - The MasterContainer display screen/History tab in Envio should no longer show the dumping transaction.

## Troubleshooting & Tips

- The terms Bins and Containers are used interchangeably
- Master Containers are located: **Production > Find > MasterContainer**
- To locate an open run in Envio: Go to **Production > Runs**. If you want to view only open runs use Column Chooser to add the heading **Is Closed** to the grid to help search.
