

# Production

## How to Create a New Run

### Where is New Run Located?

- **Production > Start a Task > New Run**

### Why & When Runs are Used

Runs are the way product is tracked and packed. All product is moved through a production line and tracked via pallet tags and labels with codes organized and controlled by Envio. Runs are the way to pack product.

### How to Create a Run

1. **Production > Start a Task > New Run**
2. Fill in the yellow **Run Station** required field. More fields may automatically

# Production

Run: - None

Save and Close | Save | Help

General | Product Dump | Product Packout | Voided Items | Materials | Charges | Log | Costs Posted | Packout Plan | Sample | Hybrid Tag

**Run Attributes**

Run Station: Boise Packout #1 | Pack Loc Name: Boise Packing Shed | Start Date: 17/2017 10:58 AM  
Run: L429 | Storage Loc Name: Boise Shed Storage | Stop Date: 1/1/9999 12:00 AM

Hours Run: 0 | Lot Code: 17107 | Run Closed: ☐  
Run Rate: 0.0000 | Run Type: Package | Blend Commodity: ☐  
Pack Line: | Pool: | Blend Supplier: ☐

**Supplier Information**

Supplier: | Commodity: Sweet Potatoes | Commodity Season: | Block: |

**Input Product Requirements**

Commodity	Stage	Variety	Pack
Sweet Potatoes	Raw		

**Output Product Requirements**

Commodity	Stage	Variety	Grade	Size	Pack	Brand
Sweet Potatoes	Packed					

3. Verify the **Start Date** field.
4. Choose a **Supplier** from the dropdown menu.
  - **Tip:** You can select which Suppliers appear in the dropdown list. Go to Company > Suppliers. Double-click on Supplier. Click the Supplier tab. Mark the **Packout Run** checkbox for this grower to populate when making a Run.
5. Fill out all additional yellow required fields and any optional information requested by your organization.
6. In the **Input Product Requirements** (Dump) area, click in the empty **Commodity** area and begin typing the commodity name, or use the dropdown to find the commodity. Do the same for the Stage field. Press TAB.
7. In the **Output Product Requirements** (Pack) area select the minimum information required. Often it may only be Commodity, Stage, and Variety.
  - **Tip:** Only product that matches these requirements exactly will pack. A typical bin, once packed, will have many different types and grades. Do not limit your packing ability by making the output requirements too strict.
8. The run has now been created. **Save** if you will continue dumping product into the run, otherwise, choose **Save and Close**.

## Troubleshooting and Tips

- The topic [How to Dump Raw Product into a Run](#) provides instruction for the populate based on Envio policies.
- To find an existing Run go to **Production > Find > Runs**
